Arguments for English Theme & English Sister City:

- ✓ 1. Heber Chase Kimball was Father & Founder of the British Mission. ^(see Life of Heber C. Kimball by Orson F. Whitney, Bookcraft)
- ✓ 2. Heber C. Kimball has proven English Ancestry (see same book above pp 502-3)
- ✓ 3. Of the first 14 early settlers who came into the valley — ^{of water} were English-born. (HBUM)
4. The first spring ^{of water} they discovered, they called "London Spring" — which still carries that name — up by Storm McDonald's old farm 1 mi. north of Heber
5. Heber City is the namesake for Heber C. Kimball who the early English Settlers greatly respected due to his English LDS Mission efforts in their behalf.
- ✓ 6. Many early Prominent Settler Family Heads were born in England & converted

Dear Colleague:

An important part of UMIA's Insurance Requirements for Obstetrical Care is the use of a recordkeeping system that adequately records pertinent prenatal data and allows for a reasonable risk scoring process.

The Uniform Perinatal Record System developed by the Utah Department of Health, Division of Family Services, is now ready for distribution at no charge to those physicians who wish to use it. It is a form that UMIA recommends as an easy and reasonable way to achieve the required recordkeeping goals.

Please find enclosed a package from the Department of Health describing the prenatal form and containing a request form which you may use to obtain whatever supply of forms you would require for your obstetrical practice.

Sincerely,

John B. Stanchfield, M.D.
Medical Director

Historical Sketch of Scotland 560-1850

*This is my country
The land that begat me;
These windy spaces
Are surely my own.*

Like our forefathers of yesteryear, we in our day are pioneers. As they of long ago, we are building our world for a better tomorrow.

From old letters, journals, poems, and pictures our forefathers' experiences and feelings suddenly become an exciting, stimulating fact of the present. Echoes from their past teach us lessons for the present and help us better appreciate how the memorable incidents which molded their lives have reached out and affected us for good.

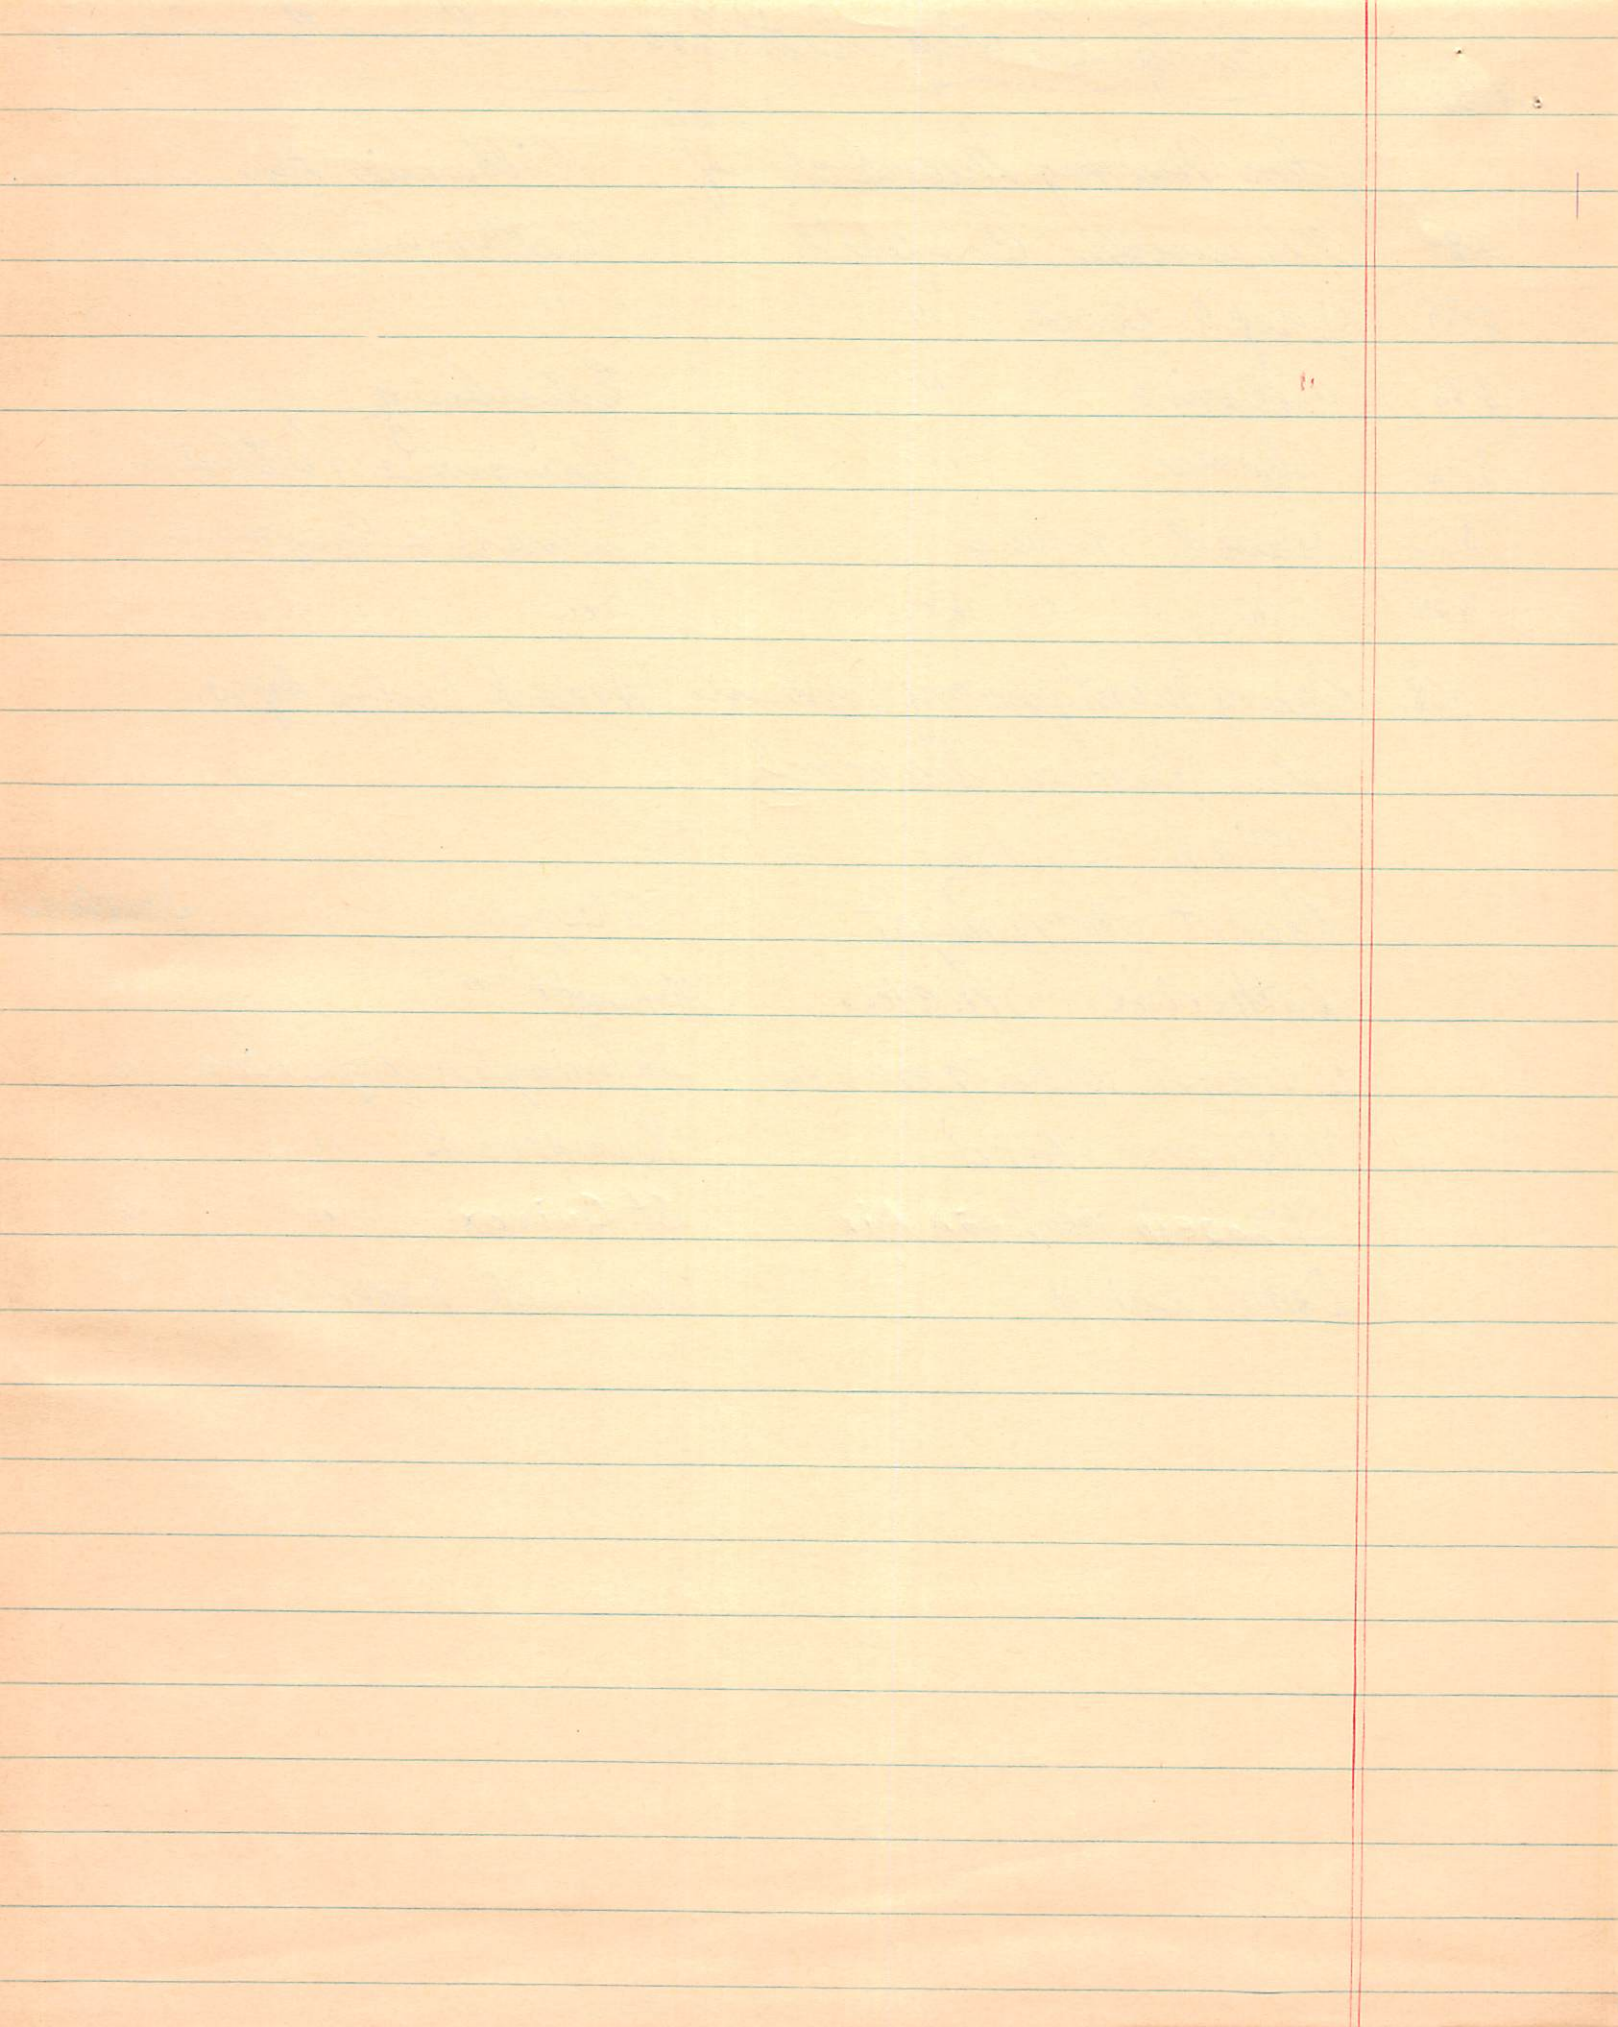

With these things in mind, it seems reasonable that they would be happy if we all would learn and appreciate something of the origin of the Scottish people, our ancestors, and the country they lived in. Surely that history and environment had much to do with the courage, independence, and strength that they so unselfishly displayed and shared throughout their lives.

The first Scots were Irishmen, members of a tribe called the Scots who lived in Ireland. About 1,500 years ago they moved into a part of Scotland now known as Argyll. When the Scots arrived, they found other people already living in the country. These were a strange forest people who painted themselves blue to frighten their enemies. The Romans called them Picts from their Latin word "pictor" meaning painter. The Romans had tried unsuccessfully to conquer these fierce, mysterious Celts, but in A.D. 563 the Scots, led by a warrior-prince-missionary named Columba, landed on the tiny Scottish island of Iona, and eventually converted Brude, king of the Picts, to Christianity.

Sometimes the Picts and Scots fought with each other or among themselves, but finally in A.D. 844 a Scottish prince with some Pictish blood in his veins united the two peoples. He was Kenneth McAlpin, the first king of Scotland. He was a great leader and warrior who was determined to protect his people from their enemies--and there was no shortage of enemies. To the southwest were Britons, to the southeast were the Angles, and all around the coasts the Vikings--Danes and Norsemen--were attacking. In the long struggle that followed, neither the Britons, Angles, nor Vikings won complete victory or met utter defeat. The blood of all three

The hair and the tiger

One day a hair was walking through the woods and he saw a tiger that had black stripes on his back. The hair asked the tiger were there was some good food for rabbits in the woods because he used to be in a pet store. Someone bought him but he got away from the little boy. The tiger told him that the good food for rabbits is on the other side of the hill. Then the tiger added that he would gladly take him to the other side of the hill if the hair would get the tiger some nice, juicy, tender meat. the hair said, 'I will if you will tell me where to get it. The tiger said, 'you can get it at the city warehouse in town

mom even said so and I believe every word she says.

he was my brother and it is my job to take care of him

the only person who would play with him at recess because

and teased him because his name was window and I was the

not very funny to him because people always were good to him

and act very stupid so that's why we named him window it is

thank ~~you~~ goodness because they would always cause problems

steven, cristine and karen they will be moving next week

44

Neurologic: Cranial nerves 2-12 are grossly intact. DTRs are 2+/4+ symmetrical. Babinski's negative.
Cerebellar and sensory exam is normal.

Extremities: No swelling, tenderness, or erythema is noted. Heberden's nodes on the 2nd and 3rd digits of the upper extremities are noted bilaterally, Left greater than right. A 10° flexion contracture of the left elbow is noted. Range of motion is full in all joints. Crepitus is noted in the shoulders, elbows, and knees. A minimal amount of fluid can be palpated in the right knee. The patient has a normal gait and station.

Laboratory: X-ray films of the knees in the AP lateral and AP weight bearing position show left narrowing of anterior joint with some spurring of the patella. The joint spaces are well preserved. The right shows narrowing of lateral compartment of the joint space and again spurring of the patella. Also bilateral spurring of the tibial spines are noted. The radiographic impression is that of mild degenerative joint disease with changes especially in the right lateral compartment. CBC results are pending.

IMPRESSION: 1. The chronic nature, unilateral distribution, relief with low doses of non-steroidal anti-inflammatories, presence of Heberden's nodes, and of physical findings and radiologic findings are consistent with an etiology of degenerative joint disease. Pseudo-gout is also a possible etiology, but is not a serious consideration at this point with the absence of other symptoms of metabolic disease or calcification as a radiographic finding.

2. Right inguinal hernia.
3. History of hypertension.
4. History of iron deficiency anemia.

PLAN: 1. The patient is to return to clinic on Wed. July 8, to discuss the radiographic findings. As he is receiving relief from his low dose Indocin at this time he will also be continued on this medication.

2. The result of the CBC draw today will be evaluated to determine the present status of the patient's anemia.

The patient
